Professional Summary

Third-year ICT student at Mzuzu University seeking an entry-level or internship role in Cybersecurity, IT Support, or Network Engineering. Hands-on in penetration testing, web application security, and Linux privilege escalation through a public 365-day lab challenge. Pairs offensive security skills with full-stack development experience and a solid grasp of TCP/IP networking.

Technical Skills

- **Security Tools:** Kali Linux, Metasploit Framework, Nmap, Burp Suite (Proxy/Intercept), Wireshark, Netcat, DVWA
- **Security Concepts:** OWASP Top 10, Penetration Testing, Vulnerability Assessment, Privilege Escalation, Network Scanning, Banner Grabbing
- **Networking:** TCP/IP, Routing, NAT, DHCP, Subnetting
- **Programming & Scripting:** Python, Bash, JavaScript, PHP, SQL
- **Web & Frameworks:** React, Next.js, Node.js
- **Operating Systems:** Linux (Kali, Metasploitable 2)

Cybersecurity Projects & Hands-On Labs

365 Days of Cyber | Self-Directed Challenge | GitHub

- Document daily hands-on cybersecurity labs on GitHub and LinkedIn, building a public, verifiable record of progress.
- Exploited and analyzed OWASP Top 10 vulnerabilities (SQL Injection, XSS, CSRF, File Inclusion, File Upload) on DVWA.
- Intercepted and manipulated HTTP traffic with Burp Suite Proxy to test application input handling.
- Scanned networks and enumerated services with Nmap; performed banner grabbing with Netcat.
- Exploited vulnerable services using the Metasploit Framework in an isolated lab environment.
- Escalated privileges on Metasploitable 2 using SUID binaries and GTFOBins techniques.
- Captured and analyzed network traffic with Wireshark to inspect protocols and identify anomalies.
- Automated network monitoring and file processing tasks with Bash scripts.

TryHackMe | Beginner Learning Pathways (in progress)

- Completing guided pathways covering core offensive security, Linux, and networking fundamentals.

Software Development

- Built full-stack web and mobile applications using React, Next.js, Node.js, PHP, and SQL.
- Developed backend logic and database-driven features in Python, JavaScript, and PHP.
- Apply secure-coding awareness from OWASP testing, including input validation and injection prevention.

Education

Mzuzu University | Bachelor's in Information and Communications Technology (ICT) | Expected 2029

- Currently in third year. Relevant coursework: [Networking, Operating Systems, Databases, Software Engineering]
